

League of Conservation Voters Climate-Smart Agriculture Michigan Survey Findings

Methodology

Quantitative Research

Global Strategy Group conducted a survey of **602 likely 2024 voters in Michigan** between August 22 and August 31, 2023. The survey was conducted on the phone, via text-to-web, and through online panel.

Confidence Interval

The confidence interval at the 95% confidence level is 4.0%.

The confidence interval on sub-samples is greater.

Demographics of Michigan

1% Republican

Key Findings

Michigan constituents want to see action in the Farm Bill to protect drinking water and help farmers and ranchers deal with extreme weather. Michiganders reject the idea that we need to choose between supporting American farmers and protecting our environment. Instead, an overwhelming majority agrees: “We can do both.” As a result, big majorities agree that Congress should take action in the upcoming Farm Bill to help farmers deal with extreme weather and protect drinking water from pollution.

They strongly support climate-smart ag funding in the IRA – and overwhelmingly oppose using the Farm Bill to repeal or redirect that funding... More than three-in-five Michigan constituents support the \$19.5 billion in the IRA to help farmers reduce pollution and make their farms more resilient to extreme weather, and they support specific programs funded by that \$19.5 billion by even larger margins. Moreover, when we put them to a choice, more than two-thirds want to use the funding as intended rather than repealing it or redirecting it to “other agricultural programs like federal subsidies for crop prices.”

... Because they overwhelmingly believe repealing the funding will harm American rural communities, America’s water, farmers and ranchers – and even themselves and their families.

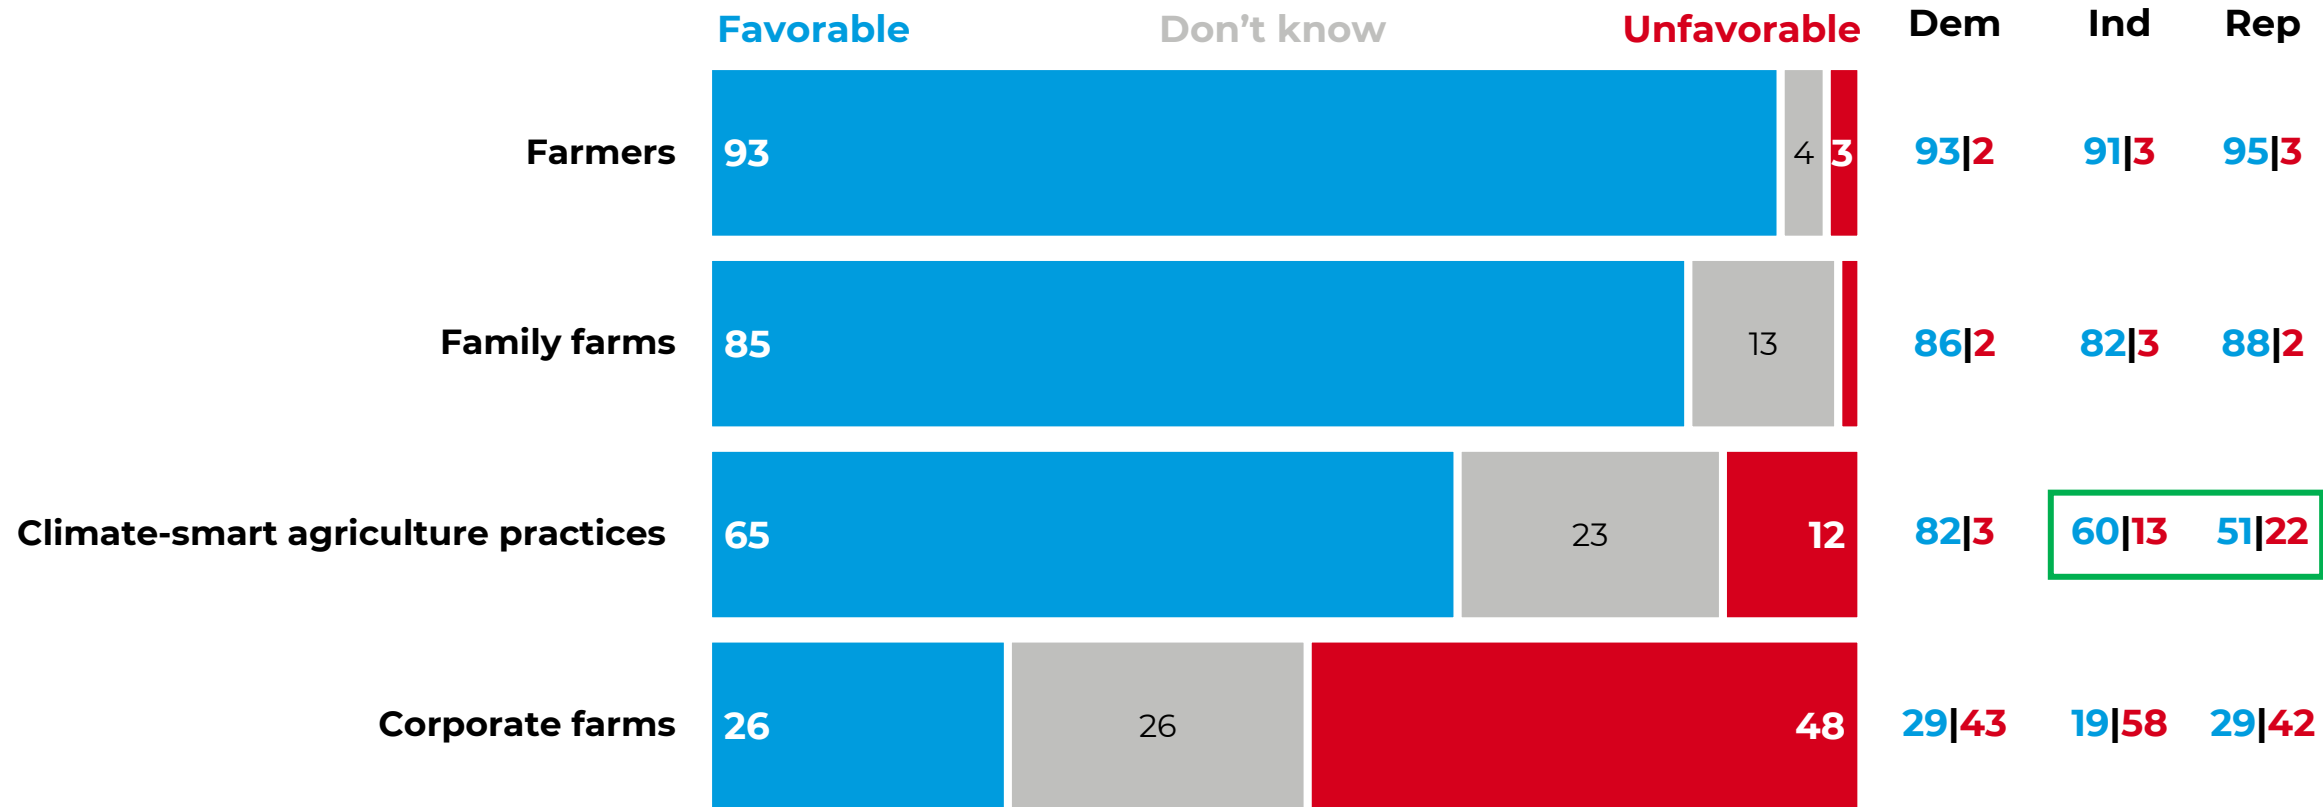

Opposition to repealing or redirecting funding holds strong after a simulated debate. After hearing a balanced debate with messaging from both sides, opposition to repealing or redirecting the climate-smart ag funding remains robust – with nearly 70% in Michigan continuing to favor using the funding as intended.

Landscape

Constituents in Michigan are intensely favorable of farmers and family farms and view climate-smart agriculture quite positively. Corporate farms are underwater

Favorability of Groups and Concepts

Governor Whitmer is viewed favorably by a majority of Michiganders, including a plurality of independents. Representative Slotkin is unknown to a majority statewide, but tends to be viewed favorably by those familiar

Gretchen Whitmer Favorability

Elissa Slotkin Favorability

Michiganders agree we need to protect our drinking water and help farmers deal with extreme weather; they resoundingly agree we don't need to choose between our farmers and the environment

Climate and Farm Bill Statements

	Agree	DK/Ref	Disagree	Dem	Total Agree Ind	Rep
In the upcoming Farm Bill, Congress should include programs that help farmers deal with extreme weather like droughts and floods	92 60% <i>strongly agree</i>		8	97	86	91
In the upcoming Farm Bill, Congress should include programs that help conserve water and protect our drinking water from pollution	90 64% <i>strongly agree</i>		10	100	84	84
We don't have to choose between supporting American farmers and protecting our environment. We can do both	90 68% <i>strongly agree</i>		10	97	85	85
As extreme weather events continue to become more frequent and more severe, we need to take steps that will make America's farms and food systems more resilient and reliable	86 58% <i>strongly agree</i>		13	96	81	80
Michigan farmers and ranchers need more tools to prepare for extreme weather	84 51% <i>strongly agree</i>		14	97	79	75
The federal government should enact agricultural policies that reduce pollution	74 42% <i>strongly agree</i>		26	97	64	53

Climate-Smart Agriculture Funding

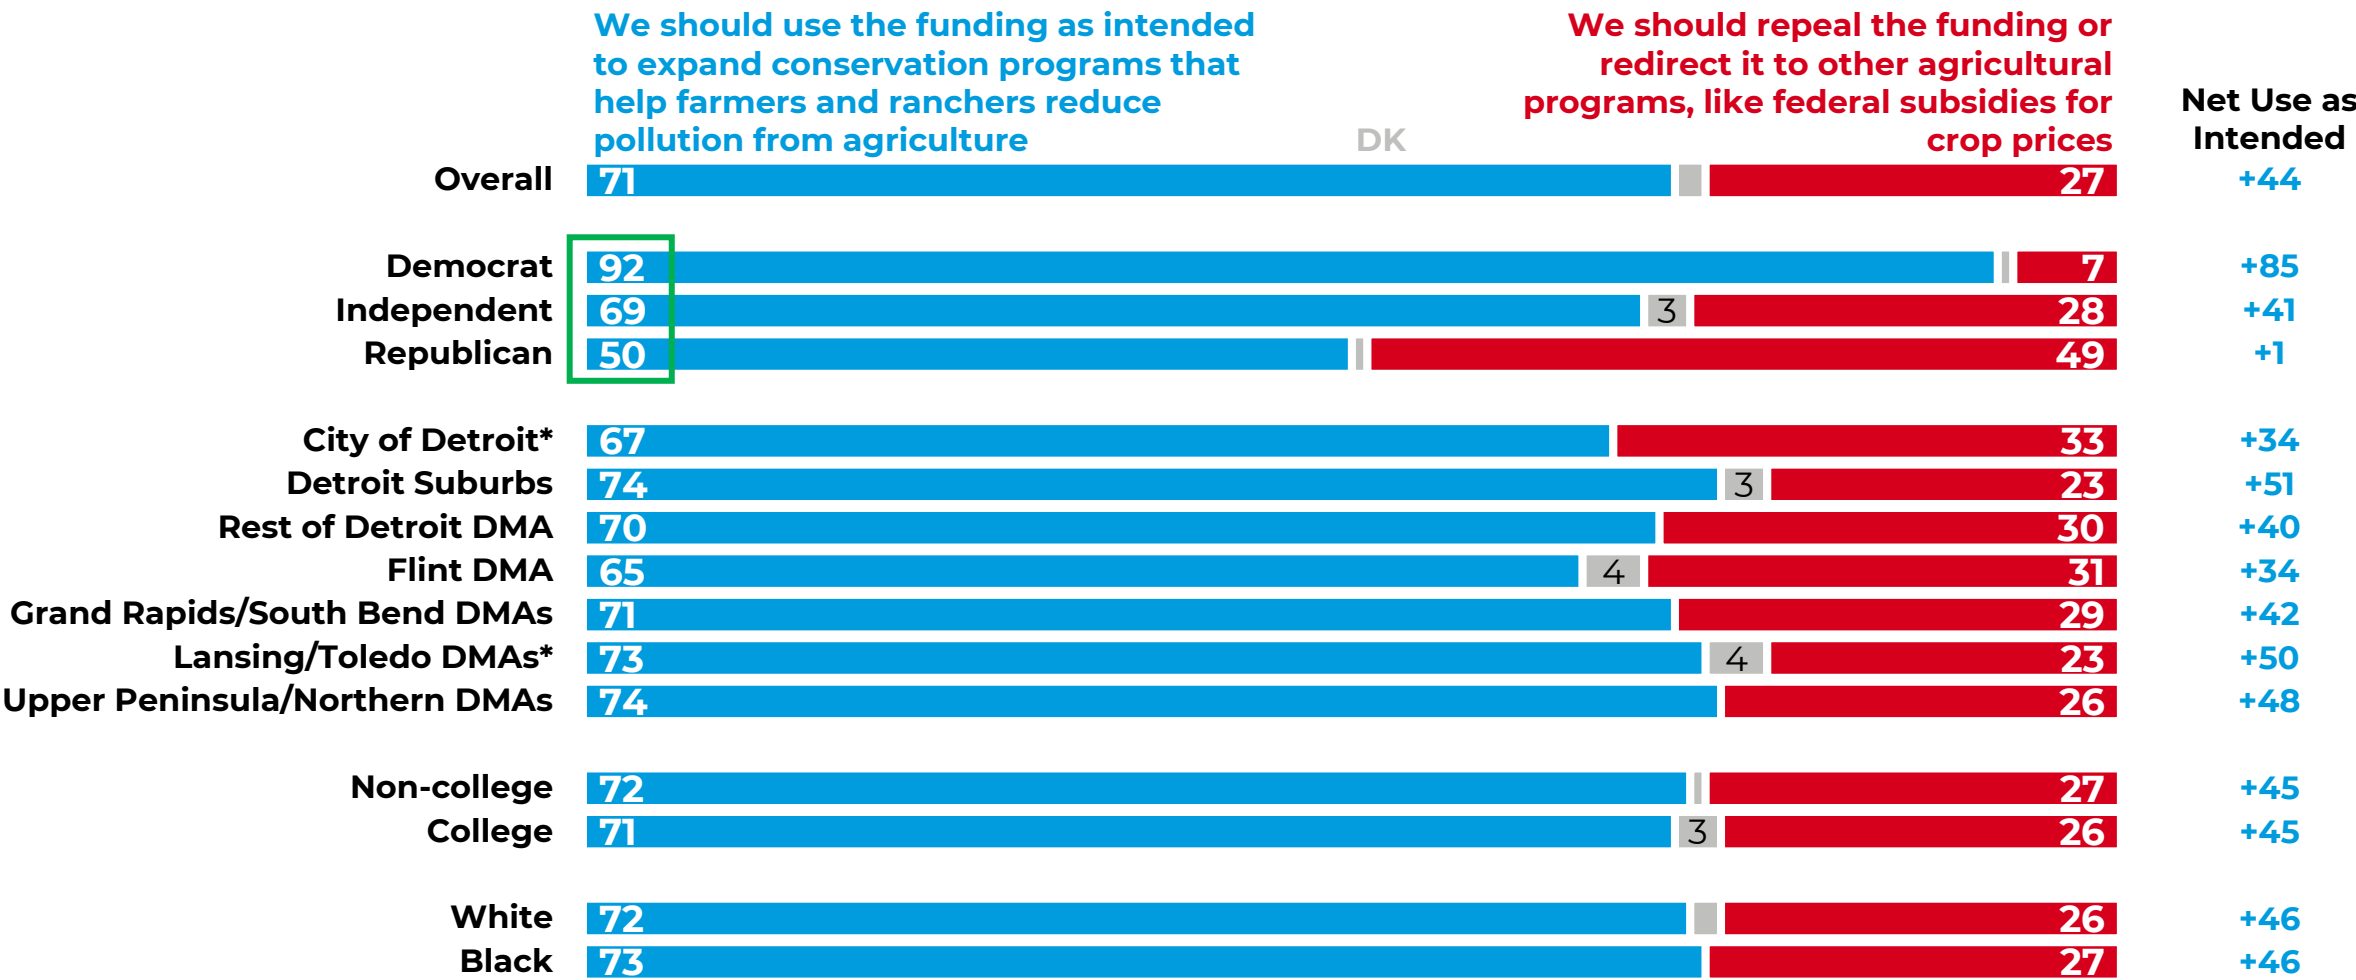

Majorities in Michigan, including independents and a plurality of Republicans, support the IRA’s funding for climate-smart agricultural programs. Specific policies enjoy high levels of support

As you may know, last year, Democrats in Congress passed the Inflation Reduction Act, which included \$19.5 billion in new funding to expand existing programs that help farmers and ranchers use practices that reduce their pollution and make their farms more resilient to extreme weather. Just based on what you know, do you support or oppose this funding?

Seven in ten support using climate-smart ag funding as intended, including majorities of independents and half of Republicans

Some members of Congress have said that as part of the Farm Bill, they want to repeal the \$19.5 billion that was provided to help farmers and ranchers reduce the amount of pollution they create by expanding conservation programs and other climate-smart agricultural practices. **Which of the following statements do you agree with more, even if neither is exactly right?**

**Small sample size: results are directional.*

Michigan constituents believe repealing this funding would have a negative impact on all metrics tested – especially America’s farmers and ranchers, drinking water, and rural communities

Impact of Repealing Funding for Climate-Smart Agricultural Programs

Each half of the sample heard a different statement from supporters, while the full sample heard the same opposition statement. Each supporter framing yielded nearly identical results

Full Text of Supporter and Opposition Messaging: Thinking again about the \$19.5 billion that was provided to help farmers and ranchers reduce the amount of pollution they create by expanding conservation programs and other climate-smart agricultural practices...

Supporters of these policies say:

[SPLIT A – FOOD SECURITY] Supporters say **this funding will be used for programs that not only help farmers and ranchers, but also provide crucial protections to ensure the U.S. food system remains safe and reliable.** Extreme weather associated with climate change, like droughts and floods, wreak havoc on farmers and endanger our country's food security. These conservation programs are an important investment in maintaining our country's food security and the well-being of our farmers, and they will provide a much-needed boost to America's rural communities, adding 90,000 new jobs in rural areas across America.

[SPLIT B – POLLUTION] Supporters say that the agricultural industry creates 10% of all climate pollution in America as well as a significant amount of toxic pollution that makes its way into our lakes, rivers, streams, and drinking water. These programs have a proven track record of reducing climate and water pollution to make sure everyone has clean water to drink and to make farms more resilient to extreme weather like droughts and floods. However, these programs are underfunded and can't meet the demand from all the farmers who want to participate. **We should listen to farmers and expand these valuable programs that protect our farmers, our food supply, and our environment.**

Opponents of these policies say:

[FULL SAMPLE] Opponents say that this funding is just another example of **runaway government spending that is driving up inflation, the price of food and groceries, and the national debt. The link between climate change and farming is being wildly exaggerated by radical politicians** who are pushing their own agenda. Congress should take this opportunity to cut this wasteful spending and, instead, invest in programs that will actually help our farmers who are still struggling to recover from the effects of the pandemic – **programs like crop subsidies and insurance** and other forms of financial assistance.

After hearing a balanced debate, an overwhelming majority still wants to use the IRA funding as intended – Republicans stand alone in favoring repeal after initially being slightly supportive

Vote Movement: Use Funding as Intended vs. Repealing/Redirecting Funding

	Use as Intended	Initial Ask Repeal/ Redirect	NET Use as Intended	Use as Intended	Informed Ask Repeal/ Redirect	NET Use as Intended
